That is great James. Thanks.

Lacking any other method to get the TNC data to you I went and bought a 16 gb thumb drive. I put it in the mail to you yesterday. It should be there by the end of the week. Would you please send the thumb drive back when you have downloaded the data?

Thanks again.

Phil

Phil,
Attached is a pdf with the points you provided. I labeled each by the corresponding project name. I will add this data to my ongoing repository and hopefully by the end of the week I will have an application where you can see all the data we have thus far.

Hi James,
I cannot open any of these files. I assume they are parts to a spacial image. Can you assemble it into a picture?

Thanks

Phil,

So here is what I got from Becky Shaftel and Ben Soiseth, they came up with the attached spreadsheet. I have reviewed it against a quarry I made and their results, in my opinion, are as good as we are going to get. They took the same list I was able to produce and went through the actual files by hand and recorded the information. I have also merged this data with a point file I produced and have attached that as well. If you have any questions please feel free to contact me. I have also sent the info to James Lopez-Baird who is working on the GIS end in Seattle.

Matthew
